

The **lscape** package*

D. P. Carlisle

2000/10/22

All text, within the `landscape` environment is rotated through 90 degrees. The environment may span several pages. It works well with, and was originally created for, use with `longtable` to produce long wide tables.

All the work is done by the `graphics` package, the trick is to call it at the right place in the output routine to rotate the current page before the page head and foot are added.

Here is what Scott Pakin wrote about the `pdftex` option:

I've made a minor improvement to `lscape.dtx` that I'd like to share with the world. My addition makes `lscape` rotate the PDF "paper" – not just the text on the page – when given the "pdftex" option. (Naturally, this works only with `pdfLaTeX`.) The result is that the text is viewable online without the reader having to rotate his/her head 90 degrees. The document still prints normally.

```
2 \newif\ifGin@pdftex
3 \Gin@pdftexfalse
4 \DeclareOption{pdftex}{%
5   \PassOptionsToPackage\CurrentOption{graphics}
6   \Gin@pdftextrue
7 }
8 \DeclareOption*{\PassOptionsToPackage\CurrentOption{graphics}}
```

*This file has version number v3.01, last revised 2000/10/22.

```

9 \ProcessOptions
10 \RequirePackage{graphics}
11 \let\LS@makecol=\@makecol
12 \let\LS@makefcolumn=\@makefcolumn
13 \def\LS@rot{%
14   \setbox\@outputbox\vbox{\hbox{\rotatebox{90}{\box\@outputbox}}}}
15   First set up the page size for landscape.
16 \def\landscape{%
17   \clearpage
18   \begingroup
19   \vsize=\textwidth
20   \hspace=\textheight
21   \linewidth=\hspace
22   \columnwidth=\hspace
23   \colroom=\vsize
24   \textheight=\vsize
25   \colht=\vsize
26   Rotate the page body (text and float pages).
27   \def\@makecol{\LS@makecol\LS@rot}%
28   \def\@makefcolumn#1{\LS@makefcolumn{#1}\LS@rot}}
29   Restore everything. This is where the pdfTeX option makes a difference.
30 \def\endlandscape{%
31   \ifGin@pdfTeX
32   \pdfpageattr{/Rotate 90}
33   \fi
34   \clearpage
35   \endgroup
36   \global\@colht=\textheight
37   \global\vsize=\textheight
38   \global\@colroom=\textheight}

```

36 </package>
